

Is the Mainframe Dead? - Free Conference Offer in Stockholm

They say that the Mainframe is a Dinosaur. Even if the Dinosaurs are extinct, it took Mother Nature 165 million years before it happened

You are currently going through an IT Education, which focuses on development of programs, infrastructure and possibilities for using these skills from a development and technical perspective, and on a conceptual and practical level.

This education makes you qualified to work in a large number of companies in the Nordic Countries and for that matter the whole world.

A large part of this world, which will be your future workplace, will have a substantial number of applications developed and run on a Mainframe, which often is the Enterprise Server in larger companies.

Is it interesting for YOU to work in a company, which uses the Mainframe as an Enterprise Server ?, Get the opportunity to sign up for the GSE Nordic Region Conference, which is a conference where specialists from larger companies in the Nordic Countries meet one another and get their skills brushed up every year on the following technical topics:

- CICS (A Transaction Server and how this Server is used in heterogeneous environments.)
- IMS (A Transaction Server, which also contains an Hierarchical Database)
- DB2 (A Relational Database)
- WMQ (A Message Queueing Engine, which is the infrastructural answer to loosely coupled transactions/applications (Message Queueing, Message Broker, Enterprise Service Bus, Process Server og Service Registry)
- Development (Language-development, performance, good advice and development tendencies)
- Architecture (SOA, components and experiences from both IBM and the attendees at the Conference)
- Rational Developer for z/Series (IBM's Development tool on workstations for applications to run on the Mainframe)

For the GSE Nordic Region Conference 2010 we have built a program, which will show you, what is happening on the IBM Mainframe, and how this fits into the IT Landscape, which hopefully will be your future choice of career.

GSE is a user-driven Conference which have more than 90 member-companies in the Nordic Countries, and these member-companies comprise among others the major part of financial sector together with many of the larger industrial companies

GUIDE SHARE EUROPE

You will get the opportunity to talk with and exchange experiences with a large number of IT Professionals, who work with the Mainframe in their daily work, both from a development, technical and architectural point of view.

This will give you the opportunity to start building your future professional network in the IBM mainframe-world, which will exist for the next many decades.

Visit www.gse-nordic.org to see, what the last conferences were all about, and see the 2011 Agenda.

If you want to signup for June 7th please send an Email to sas@jndata.dk. Your registration will give you admittance to both technical seminars and Lunch/Coffee-breaks. We have reserved a limited number of FREE seats for you on a first-come basis.

So welcome to the GSE Nordic Region Conference 2011 at Hotel Scandic Infracity in Stockholm, Sweden.
